

Welcome

The following excerpts from our 10th Edition, 2001, Manual of Millwork are offered as a comprehensive summary of the general information include within the 'standards'.

We have furnished the general information aspects in their entirety; however, the specific grade rules are excluded intentionally to protect our sale of the standards (grade rules) to fabricators and installers of architectural millwork products; which intern supports our providing the standrads free of cost to architects, designers, and specification writers.

Woodwork Institute of California

Disclaimer

The Woodwork Institute of California has used its best effort to promulgate this 9th Edition Manual of Millwork, Standards of the Architectural Millwork Industry, for the benefit of the public based on a thorough review of available information, testing and accepted industry practices. The Manual of Millwork is not intended to override local building codes and may conflict with certain "localized" and/or individual firms practices. The Institute offers this Manual for use by, architects, design professionals, specification writers, consultants, builders, contractors, owners, and government agencies who specify and/or accept architectural millwork and its installation. These architectural millwork standards will afford the user an assurance of quality materials, fabrication and installation consistent with economic utilization of resources for the WIC Grade selected. The Institute does not guarantee or assure the safety or performance of any manufactured products, components or installation thereof performed in accordance with these WIC Standards.
